

Atlas Synthetic PDF Test Document

Purpose: exercise PDF text extraction + chunking without prod docs.

Section 1 — Plain text

Keyword anchors: ALPHA_BRAVO_CHARLIE, RAG_EVAL_SENTINEL_001, and QDRANT_PAYLOAD_CHECK.

This paragraph is intentionally long to test wrapping. Atlas should be able to ingest this PDF, extract text, and chunk it consistently. If extraction fails, you may see few or zero chunks indexed.

Section 2 — Bullets

- First bullet: ingestion should preserve order.
- Second bullet: corpus scoping should apply.
- Third bullet: HITL workflows should remain optional.

Section 3 — Small table

Field	Value
tenant_id	local
project_id	default
corpus_id	pdf-synthetic
doc_id_hint	atlas-synth-pdf

Section 4 — Code-ish block

```
curl -H "X-Atlas-Admin-Token: ..."
http://localhost:18080/admin/looking-glass/qdrant
```

Section 5 — Page break stress
